David J. Linden. Unique: The New Science of Human Individuality was published in English. by Basic Books on September 29, 2020. You can order it here.

David J. Linden

The New Science of Human Individuality By David J. Linden In the longstanding debate over whether “nature” or “nurture” determines how we turn out, the old saw goes like this: When your first baby...

Beyond Nature vs. Nurture, What Makes Us Ourselves? - The ...

David J. Linden is a Professor in the Department of Neuroscience at the Johns Hopkins University School of Medicine. His laboratory has worked for many years on the cellular substrates of memory storage in the brain and a few other topics.

David J. Linden - amazon.com

David J. Linden has devoted his career to understanding the biology common to all humans. But a few years ago he found himself on OkCupid. Looking through that vast catalog of human diversity, he got to wondering: What makes us all so different? Unique is the riveting answer. Exploring everything from the roots of sexuality, gender, and intelligence to whether we like bitter beer, Linden shows how our individuality results not from a competition of nature versus nurture, but rather from a ...

Unique: The New Science of Human Individuality - Kindle ...

David J. Linden is a professor of neuroscience at the Johns Hopkins University School of Medicine, where his lab studies memory storage and recovery of function after brain injury. He is the author of three previous books: Touch, The Accidental Mind, and The Compass of Pleasure. He lives in Baltimore, Maryland.

Unique: The New Science of Human Individuality by David ...

In a work at once deeply learned and wonderfully accessible, the neuroscientist David J. Linden counters the widespread assumption that the brain is a paragon of design—and in its place gives us a compelling explanation of how the brain's serendipitous evolution has resulted in nothing short of our humanity.

The Accidental Mind — David J. Linden | Harvard University ...

David J. Linden has devoted his career to understanding the biology common to all humans. But a few years ago he found himself on OkCupid. Looking through that vast catalog of human diversity, he got to wondering: What ma Inspired by the abundance of unique personalities available on dating websites, a renowned neuroscientist examines the science of what makes you, you.

Unique: The New Science of Human Individuality by David Linden

Dr. David J. Linden is a professor of neuroscience at the Johns Hopkins University School of Medicine. His research examines the cellular substrates of memory storage, the molecular basis of addiction, and recovery of function following brain injury among other topics. Dr. Linden has authored or co-authored more than 100 peer-reviewed publications and has written two neuroscience books for general audiences.

Neuroscientist David Linden told us that touch is crucial to early human development, even more so than being able to see or hear. And touch is key to life satisfaction and happiness when we're older, too. Even basketball teams have more wins when team members positively touch each other. But after the pandemic ends, will people even want to touch each other again?

The Power Of Touch | RadioWest

David J. Linden, Ph.D., is a Professor in the Department of Neuroscience at the Johns Hopkins University School of Medicine. His laboratory has worked for many years on the cellular substrates of memory storage in the brain and a few other topics.

The "New York Times" bestselling author of "The Compass of Pleasure" examines how our sense of touch is interconnected with our emotions Dual-function receptors in our skin make mint feel cool and chili peppers hot.

From the New York Times bestselling author comes a "hugely entertaining" (NPR.org) look at vice and virtue through cutting-edge science As he did in his award-winning book The Accidental Mind, David J. Linden—highly regarded neuroscientist, professor, and writer—weaves empirical science with entertaining anecdotes to explain how the gamut of behaviors that give us a buzz actually operates. The Compass of Pleasure makes clear why drugs like nicotine and heroin are addictive while LSD is not, how fast food restaurants ensure that diners will eat more, why some people cannot resist the appeal of a new sexual encounter, and much more. Provocative and illuminating, this is a radically new and thorough look at the desires that define us.

Linden sets the record straight about the construction of the human brain; rather than the "beautifully-engineered optimized device, the absolute pinnacle of design" portrayed in many dumbed-down text books, pop-science tomes, and education television programs, Linden's organ is a complicated assembly of cobbled-together functionality that created the mind as a by-product of ad-hoc solutions to questions of survival. His guided tour of the glorious amalgam of "crummy parts" includes pit-stops in the histories and fundamentals of neurology, neural-psychology, physiology, molecular and cellular biology, and genetics.

A spirited collection of essays by cutting-edge neuroscientists that irreverently explores the quirky and counterintuitive aspects of brain function Neuroscientist David J. Linden approached leading brain researchers and asked each the same question: "What idea about brain function would you most like to explain to the world?" Their responses make up this one-of-a-kind collection of popular science essays that seeks to expand our knowledge of the human mind and its possibilities. The contributors, whose areas of expertise include human behavior, molecular genetics, evolutionary biology, and comparative anatomy, address a host of fascinating topics ranging from personality to perception, to learning, to beauty, to love and sex. The manner in which individual experiences can dramatically change our brains' makeup is

explored. Professor Linden and his contributors open a new window onto the landscape of the human mind and into the cutting-edge world of neuroscience with a fascinating and enlightening compilation that science enthusiasts and professionals alike will find accessible and enjoyable.

Inspired by the abundance of unique personalities available on dating websites, a renowned neuroscientist examines the science of what makes you, you. David J. Linden has devoted his career to understanding the biology common to all humans. But a few years ago he found himself on OkCupid. Looking through that vast catalog of human diversity, he got to wondering: What makes us all so different? Unique is the riveting answer. Exploring everything from the roots of sexuality, gender, and intelligence to whether we like bitter beer, Linden shows how our individuality results not from a competition of nature versus nurture, but rather from a mélange of genes continually responding to our experiences in the world, beginning in the womb. And he shows why individuality matters, as it is our differences that enable us to live together in groups. Told with Linden's unusual combination of authority and openness, seriousness of purpose and wit, Unique is the story of how the factors that make us all human can change and interact to make each of us a singular person.

Interest in techniques to control the brain and thereby improve its function has surged, yet how realistic are these expectations and what are the ethical implications? This book reviews the main techniques of controlling brain processes for medical purposes, situating them within ethical and legal debates on autonomy and fairness.

This book, a follow-up to the editors' Synaptic Plasticity (MIT Press, 1993), reports on the most recent trends in the field. The levels of analysis range from molecular to cellular and network, the unifying theme being the nature of the relationships between synaptic plasticity and information processing and storage. Many neurons exhibit plasticity; that is, they can change structurally or functionally, often in a lasting way. Plasticity is evident in such diverse phenomena as learning and memory, brain development, drug tolerance, sprouting of axon terminals after a brain lesion, and various cellular forms of activity-dependent synaptic plasticity such as long-term potentiation and long-term depression. This book, a follow-up to the editors' Synaptic Plasticity (MIT Press, 1993), reports on the most recent trends in the field. The levels of analysis range from molecular to cellular and network, the unifying theme being the nature of the relationships between synaptic plasticity and information processing and storage. Why can't we tickle ourselves? Why do footballers who hug score more goals? Why does holding a hot coffee make us feel more positively about people? Touch is the sense that make us human. It defines our experiences, shapes our sense of self, and bonds us together. This riveting book from acclaimed neuroscientist David J. Linden is full of revelations about the biology and psychology of touch. It will make you see the world differently - and feel the world differently, too.

When his wayward twin brother tricks him into marrying a vicar's widow, Marcus Reece, Duke of Exeter, finds his life forever changed by this spirited beauty as they are both swept into a world of deception, betrayal, and passion.
