Reboot student learning the right way! Today's most successful school leaders are truly "learning engineers": creative thinkers who redefine their problems and design new ways to better serve kids' success. Technology has a critical role, but it's the creative reinvention of schools, systems, and classrooms that has to come first. In this powerful book, best-selling author and education policy expert Rick Hess and chief learning officer Bror Saxberg show you how to become your school's learning engineer. Using cutting-edge research about learning science as a framework, you'll:

- Identify specific learning problems that need solving
- Devise smarter ways to address them
- Implement technology-enabled, not technology-driven, solutions

An engineering professor who started out doing poorly in mathematical and technical subjects in school offers tools, tips and techniques to learning the creative and analytical thought processes that will lead to achievement in math and science. Original.

Algebra doesn't have to consist of solving hundreds of apparently meaningless problems! These worksheets, while they include abstract problems to help the student practice the skills, also include real-life problems that allow the student to remember the purpose of what they're learning, give them a chance to explore God's handiwork, and equip them to apply math outside of a textbook. Easy-to-use daily schedule Carefully graduated problems to help students learn the material Built-in review of concepts Problems that let the students apply algebra to real-life settings Perforated pages to tear out and hand students Chapter quizzes and quarter tests, along with a final exam
