Cites successful examples of community-based policing

Violent and property crime rates in all Western countries have been falling since the early and mid-1990s, after rising in the 1970s and 1980s. Few people have noticed the common patterns and fewer have attempted to understand or explain them. Yet the implications are essential for thinking about crime control and criminal justice policy more broadly. Crime rates in Canada and the United States, for example, have moved in parallel for 40 years, but Canada has neither increased its imprisonment rate nor adopted harsher criminal justice policies. The implication is that something other than mass imprisonment, zero-tolerance policing, and " three-strikes " laws explains why crime rates in our time are falling. The essays in this 43rd volume of Crime and Justice explore the possibilities cross-nationally. They document the common rises and falls in crime and look at possible explanations, including changes in sensitivity to violence generally and intimate violence in particular, macro-level changes in self-control, and structural and economic developments in modern states. The contributors to this volume include Marcelo Aebi, Andromachi Tseloni, Eric Baumer, Manuel Eisner, Graham Farrell, Janne Kivivuori, Tapio Lappi-Seppälä, Suzy McElrath, Richard Rosenfeld, Rossella Selmini, Nick Tilley, and Kevin T. Wolff.

Many theories—from the routine to the bizarre—have been offered up to explain the crime decline of the 1990s. Was it record levels of imprisonment? An abatement of the crack cocaine epidemic? More police using better tactics? Or even the effects of legalized abortion? And what can we expect from crime rates in the future? Franklin E. Zimring here takes on the experts, and counters with the first in-depth portrait of the decline and its true significance. The major lesson from the 1990s is that relatively superficial changes in the character of urban life can be associated with up to 75% drops in the crime rate. Crime can drop even if there is no major change in the population, the economy or the schools. Offering the most reliable data available, Zimring documents the decline as the longest and largest since World War II. It ranges across both violent and non-violent offenses, all regions, and every demographic. All Americans, whether they live in cities or suburbs, whether rich or poor, are safer today. Casting a critical and unerring eye on current explanations, this book demonstrates that both long-standing theories of crime prevention and recently generated theories fall far short of explaining the 1990s drop. A careful study of Canadian crime trends reveals that imprisonment and economic factors may not have played the role in the U.S. crime drop that many have suggested. There was no magic bullet but instead a combination of factors working in concert rather than a single cause that produced the decline. Further—and happily for future progress, it is clear that declines in the crime rate do not require fundamental social or structural changes. Smaller shifts in policy can make large differences. The significant reductions in crime rates, especially in New York, where crime dropped twice the national average, suggests that there is room for other cities to repeat this astounding success. In this definitive look at the great American crime decline, Franklin E. Zimring finds no pat answers but evidence that even lower crime rates might be in store.

This ninth edition of "Criminology" thoroughly examines crime in a broad context, looking closely at the socioeconomic sources of crime and the organization of criminal behavior. This distinctive approach offers readers a uniquely broad-based perspective and advances the overall understanding of crime. This new edition includes up-to-date and topical material—for example, the motives of suicide bombers and the looting after the 2004 tsunami—to engage students and demonstrate the relevance of criminology in contemporary society.

Across America, crime is a consistent public concern. The authors have produced a comprehensive work on major criminological theories, combining classical criminology with new topics, such as Internet crime and terrorism. The text also focuses on how criminology shapes public policy.

In this wide-ranging analysis, Michael Tonry argues that those responsible for crafting America's criminal justice policy have lost their way in a forest of good intentions, political cynicism, and public anxieties. American crime control politics over time have created a punishment system no one would knowingly have chosen yet one that no one seems able to change. Prevailing sensibilities rather than timeless truths govern the American war on crime, resulting in policies both wasteful and harsh. U.S. crime trends closely resemble those of other nations, yet American policies, shaped by different sensibilities, are much more punitive. Seamlessly blending history with an easy presentation of day-to-day realities and empirical evidence, Tonry proposes tangible, specific solutions that can serve as a platform for criminal justice reform. We know how to create an effective and humane criminal justice system. Now we must have the courage to do so, by abandoning the current status quo, which is both costly and cruel in favor of practices that will move America closer to the mainstream of contemporary Western values.
